PREVENTION of FIRES.—The attention of those who are interested in building is earnestly invited to a

METHOD OF CONSTRUCTING THE FLOORS, CEILINGS, & ROOFS OF HOUSES ON AN IMPROVED FIRE-PROOF PRINCIPLE,

THE ADOPTION OF WHICH SECURES MANY IMPORTANT ADVANTAGES,

AT A COST NOT GREATER THAN THAT OF THE COMMON MODE OF BUILDING WITH TIMBER.

This most desirable object is attained by the substitution of incombustible materials, chiefly iron and concrete, in the formation of the floors and roofs; thereby superseding the use of timber joists, &c., but retaining, or not, as may be desired, a finished boarded surface for the floors.

From the published investigations of the most competent authorities, it would appear that no beams in which timber joists are used is practically secure from the danger of fire; but no method of fire-proof building yet introduced has been available for ordinary domestic buildings on account of the expense. This difficulty is now so entirely removed by the introduction of an improved method of construction, that it is simply a matter of choice whether a building shall be fire-proof or not. Compared, indeed, with the ordinary description of timber floors, the fire-proof method exhibits considerable economy, and the total cost of a building will be still further reduced when the roof is constructed on this improved principle. For many years the system of fire-proof construction has proved its superiority by a trial of numerous years; and it not only affords perfect security from the ravages of fire, but insures greatly increased strength and durability to the building together with a saving from annual decay and repairs, and from the annoyance of vermin and noxious effluvia, so inseparable from the ordinary mode of building.

For the object to which public attention is now so generally directed,—viz., the commencement of improved dwellings for the labouring classes, this system is peculiarly applicable; for where it is to be considered that several hundred individuals will generally be congregated under the roof of a building, probably five or six stories high, it is fearful to contemplate the sacrifice of life which may occur in the event of fire.

The Metropolitan Association, established for this object, have availed themselves of the advantages of the system in the construction of a large block of dwellings for the model families, just completed in Spitalfields; and several large model lunatic asylums, workhouses, private mansions, dwelling-houses, offices, &c., are also either completed or in course of erection, indicating a wide and extensive appreciation of the advantages of this improved plan of building.

A pamphlet fully descriptive of the system, and all further information, may be obtained on application to the proprietors of the patent,
